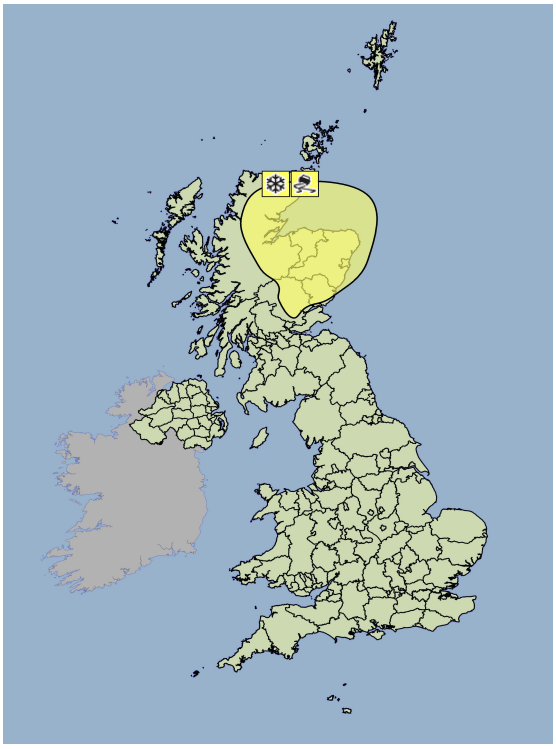
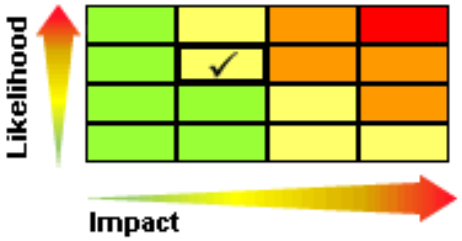
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone in cold air will move slowly and erratically southwards across the area, generating rain near coasts but sleet and snow inland, with 2-6 cm of snow down to low levels locally and up to 10 cm on hills.

There will be large variations in accumulations due to the showery nature of the snow with some places expected to see little or no snow.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **16:40 on Fri, 12th Feb 2016** until **23:59 on Fri, 12th Feb 2016**

A band of rain, sleet or snow showers will affect parts of northern Scotland during Friday afternoon before moving slowly southwards. Snow will be initially confined to high ground but will start falling to lower levels away from coasts. Icy roads may also be a hazard where precipitation falls on frozen surfaces.

Please be aware of the potential for difficult driving conditions and some disruption to transport.

This warning has been updated to extend area into western Tayside, to include much of Perthshire and parts of Kinross for snowfall this evening (with further snowfall expected here overnight; see separate warning for Saturday).
